

2026 IT Security Policy

BioMar Group

Kalkværksvej 16, 15.
8000 Aarhus C
Denmark

www.biomar.com

Acceptable use of IT equipment and devices

- Your BioMar user account is strictly private, and you may never share your credentials with anyone.
- BioMar IT equipment and BioMars corporate connectivity must not be used to visit websites whose content is of an illegal or criminal nature.
- You may not use BioMar equipment and devices for purposes that are in violation of the law. This means, among other things, that you must not download, store, use, copy or distribute material that is in violation of e.g., copyright legislation (movies and music) and license agreements (software).
- You may not change the security level of BioMar IT equipment and devices, i.e., change the configuration of firewall, antivirus, block updates etc.
- Always lock your IT equipment and devices when you are not using them. This prevents unauthorized access to your data and applications. Do not leave your IT equipment and devices unattended in public places or share them with others.
- Private storage services like Google Drive, Dropbox, etc. must not be used to store BioMar data and information. To store BioMar data and information you must use BioMar owned platforms e.g. OneDrive, Teams, and SharePoint.
- To secure BioMars network it is not allowed to access BioMars corporate network from IT equipment not owned or controlled by BioMar. Only the guest network can be used for private computers and devices.

BioMar Computer

A computer provided by BioMar is the property of BioMar and must be treated accordingly. It may only be used for BioMar use and general limited private purposes.

A BioMar computer must not be used for crypto mining, illegal activities, downloading or sharing pirated content, accessing or distributing obscene, pornographic material, or discriminatory material.

When using a BioMar computer, avoid installing unauthorized or unapproved IT systems, devices, software, or services since unapproved software can pose significant security risks, such as data breaches, compliance violations, viruses and ransomware.

Never use external media, such as USB-sticks, hard drives, CDs, or memory cards you have found or received from people you don't know and never give any external media to people you don't know and never use private external media.

Smartphones and tablets

Smartphones and tablets pose just as big a security risk as computers. Therefore, it is not allowed to jailbreak a phone with access to BioMar data. Furthermore, you must not download any illegal or harmful apps from 3rd party app stores.

To use your smartphone or tablet to access any BioMar data or applications you must be enrolled in BioMars Mobile Device Management (MDM) solution. Workday is excepted from this.

Use of AI, machine learning, translation services and chats

Free online services like ChatGPT and Google Translate are nice tools to use but they can also pose a security risk to BioMar. Free translation services like Google Translate and free AI agents like ChatGPT require users to agree to the transfer of their data, giving third parties the right to share or index the content entered for their own purposes. Therefore, you must never use these kinds of tools to sensitive BioMar information and data e.g. personal data, contracts, financial data etc.

It is recommended to use BioMars AI agent CoPilot. This is a BioMar paid enterprise AI which runs in a closed circuit, so all information stays in BioMar.

Use of your BioMar e-mail

You must not use your BioMar e-mail to create private accounts on e.g. social media and online shopping sites. If the site gets hacked, the cybercriminals will have your BioMar email and password used for the site. This can pose a security risk for BioMar, and it also makes it easier for the cybercriminal to portrait you and disguise a potentially phishing attack as an email from a site on which you are registered.

LinkedIn is exempted from this if you are using it for work related purposes e.g. recruiting. It is forbidden to use the online access and/or e-mail account for any other business-related activities than the ones conducted for BioMar.

Training and Awareness

During your employment at BioMar it is expected that all employees prioritize to complete and read all security training and awareness they receive.

Lost or stolen equipment

If any IT equipment or device is lost, it must be reported immediately to ServiceDesk at +(45) 69 16 50 01 or at MyIT.

Owner and approver

Owner:	Global IT
Approver:	Executive Committee
