Finance Policy

BioMar Group

Kalkværksvej 16, 15.

8000 Aarhus C

Denmark

www.biomar.com

Description

The overall finance policy is supported by detailed guidelines, communicated and implemented across all BioMar units, and structured around four key pillars.

Key Points

Financial Reporting & Planning

Financial statements are prepared in accordance with international accounting standards (IFRS), with local

statutory requirements applied locally where relevant.

Annual and periodic planning processes align financial resources with strategic objectives. Capital allocation follows structured evaluation of business opportunities, strategic alignment, and potential value generation.

Risk Management & Controls

Internal controls are maintained based on recognized frameworks with systematic monitoring of key processes. Financial exposures are assessed through comprehensive procedures and approval processes. Risk mitigation strategies and control mechanisms are embedded in core processes to maintain financial integrity and operational resilience.

Tax Compliance

BioMar is committed to responsible tax management, complying with applicable legislation and maintaining cooperative relationships with authorities. Transactions with related parties are conducted at arm's length in line with international guidelines, with appropriate documentation maintained.

Treasury

Treasury operations manage foreign exchange risk, banking relationships, and financing activities to optimize liquidity. Regular reviews and monitoring ensure adherence to policies and procedures, supported by clear governance and escalation processes.
